IBM-FE-Chat Application UI

Phase 5 — Project Demonstration & Documentation

Final Demo Walkthrough

The final demonstration will showcase the **IBM-FE-Chat Application UI** as a functional and interactive web-based chat interface built using **HTML, CSS, and JavaScript**.

Demo highlights:

- **Chat Dashboard:** User interface displaying a contact list and chat area.
- **Message Interface:** Sending, displaying, and aligning messages dynamically.
- **Responsive Design:** Smooth adaptability across mobile, tablet, and desktop.
- **UI Interactions:** Active contact highlight, message scroll, and typing simulation.

Objective:

To demonstrate the capability of a pure front-end solution to mimic real-time chat features through dynamic DOM manipulation and local data storage.

Project Report

The project report will explain the complete design, development, and implementation process.

The title card features a dark brown circle on the left, a light brown rectangular background for the title, and a thin blue line at the top left.

IBM-FE-Chat Application UI

Contents:

- **Project Overview:**

The IBM-FE-Chat Application UI is designed as a user-friendly, responsive web interface that enables users to simulate a chat experience without a backend.

- **Technologies Used:**

- **HTML5:** For page structure and semantic layout.
- **CSS3:** For styling, animations, and responsive grid/flex layouts.
- **JavaScript (ES6):** For handling logic, DOM events, and data updates.

- **System Design:**

- UI divided into Sidebar (contacts) and Main Chat Window (messages).
- JavaScript modules control data handling, event listeners, and message rendering.

- **Implementation Summary:**

Developed in multiple phases – UI design, feature development, testing, and final integration.

- **Future Scope:**

- Integration with a backend (Node.js/Socket.io) for real-time communication and database storage.

Screenshots / Documentation

Documentation

IBM-FE-Chat Application UI

- Folder structure (index.html, style.css, script.js).
- Key functions explained with inline comments.
- Step-by-step setup guide for running locally.

Challenges & Solutions

Challenge	Solution Implemented
Designing a responsive two-panel chat layout	Used CSS Flexbox and media queries for adaptive design
Handling message display dynamically	Implemented JavaScript DOM manipulation with message templates
Keeping the UI interactive without backend	Used event-driven JS logic and simulated responses
Ensuring smooth scrolling and message alignment	Added JS scroll functions and CSS auto-scroll behavior

GitHub README & Setup Guide

The **README.md** will serve as a complete guide for users and reviewers.

Contents

- **Project Title:** IBM-FE-Chat Application UI
- **Description:** A front-end chat simulation built using HTML, CSS, and JS.
- **Tech Stack:** HTML, CSS, JavaScript
- **Installation Guide:**

```
git clone <repository-link>
```

```
cd ibm-fe-chat-ui
```

```
open index.html in browser
```

IBM-FE-Chat Application UI

Features:

- Responsive chat layout
- Message send/receive simulation
- Typing effect animation
- User-friendly interface

Folder Structure:

/ibm-fe-chat-ui

- |—— index.html
- |—— style.css
- |—— script.js

Final Submission

- **GitHub Repository:** Includes HTML, CSS, JS files, assets, and documentation.
- **Deployment:** Hosted on GitHub Pages for public access.
- **Deployment link :** <https://jeyanthfrondend.github.io/IBM-FE-chat-application/>
- **Submission Package Includes:**
 - Source Code (Frontend Files)
 - Project Report (PDF/Doc)
 - Screenshots
